

# MARINE TECHNOLOGY COOPERATION IN EAST ASIA

## THE CASE OF SMART OCEAN FOR CHINA & ASEAN

The Smart Ocean initiative can help ASEAN to develop scientific solutions to address the marine related problems of climate change, ecosystem degradation and environmental management. Many enabling technologies to help address these marine related problems are already developed in China. The question is how to transfer them to cooperative platforms between ASEAN and China.

Dr. Chan Hing Lee Henry is an adjunct research fellow at the East Asia Institute, National University of Singapore. He has a Bachelor of Science degree in Electrical Engineering (1981) from the University of the Philippines, Master of Science degree in Biopharmaceuticals (2004) from the University of New South Wales and Ph.D. in General Management (2017) from the Singapore Management University.
